

UV PROJECT CALCULATOR PRO

COMMUNITY EDITION

Welcome to the Founding Community Test Team

Know Your Costs. Price With Confidence. Grow Your UV Printing Business.

Dear Founding Community Test Team Member,

Thank you for helping test UV Project Calculator Pro Community Edition before its public release. Your time and honest feedback will directly shape Version 1.0 and future improvements for the UV printing community.

This application began as a way to answer one practical question: "What should I charge for this UV printing job?" It has grown into business software for pricing, project management, scenario planning, printer profiles, business libraries, reports, and profitability guidance.

What I am asking you to do

- Use the application naturally with realistic project information.
- Try creating, saving, reopening, duplicating, and editing projects.
- Test printer profiles and Scenario Builder.
- Create a backup and confirm the interface behaves as expected after refreshing.
- Report anything confusing, broken, difficult to read, or unexpected.

How to send feedback

Open Help & Feedback inside the application. Use Report a Bug for problems, Request a Feature for ideas, or Contact Support for questions. The application prepares an email with the version, build, browser, operating system, current screen, and active printer. You can review all information before sending it.

Testing Build

Version 1.0 RC1 - Build 1021 - Founding Community Test Team Edition

Please do not worry about whether an observation seems too small. Readability, wording, navigation, and workflow comments are just as valuable as technical bug reports.

Thank you for helping create software built by a UV printer owner for the UV printing community.
